PROJECTS

LiftaGram

- Learned React and built a full CRUD MERN stack app in 7 days
- User-centric delete button, appears only to posts belonging to that user
- "Like" button is user-centric, changed color from grey to red
- Seamless single-page UI creates a frictionless user browsing experience
- Technologies used: HTML, CSS, JS, React, Node.js, Semantic-UI, Deployed on Heroku

Fanime

- Utilized a third-party API called Kitsu to build our database
- Developed the backend that made API calls to the Kitsu API and stored the data in a PostgreSQL database.
- In order for users to be able to favorite anime and add it to their profile page, I developed an algorithm that stores the anime details once an anime has been viewed. This way, our database grows the more the site is explored.
- Utilized OAuth methods for social media/web presence integration
- Oauth allows users to sign in via google.
- Technologies: Developed a fully responsive design. Built with Django, Python, PostgreSQL, Materialize, and deployed to Heroku

EXPERIENCE

Sea-Tac International Airport, Seattle, WA | *Transportation Security Officer*

April 2016 - July 2018

 I was tasked with screening the traveling public. This involved maintaining control in high stress situations, attention to detail when screening luggage, passengers, and property. I was trained to use a Rapiscan X-ray machine to screen Baggage, Trained on a monthly basis to keep up my industry knowledge and solidify my skills.

EDUCATION

General Assembly | *Seattle, WA*

Graduated May 2021

Renton Technical College | *Renton, WA*

Carpentry 2018 - 2021

SKILLS

Python, Django

PostgreSQL, MongoDB, Mongoose.js

HTML5, CSS3

JavaScript(ES6), React, Node.js, Express

Git, AWS, Heroku

CERTIFICATIONS

Graduate Certificate
MERN | General Assembly

INTERESTS

Powerlifting

Anime/Manga
